"FAKE n HATE: Detecting FAKE news and HATE speech" - Part 1

[Prof. Paolo Rosso](#)

Universitat Politècnica de València, Spain

Fake News

The rise of social media has offered a fast and easy way for the propagation of fake news and conspiracy theories. Despite the attention that has received, fake news detection remains an open problem and users keep sharing texts that contain false statements. In this first seminar, I will describe how to go beyond textual information to detect fake news, taking into account also affective and visual information because providing important insights on how fake news spreaders aim at triggering certain emotions in the readers. I will also describe how psycholinguistic patterns and users' personality traits may play an important role in discriminating fake news (or conspiracy theory spreaders) from fact checkers.

EVENTO APERTO A:

Docenti | Teachers, Borsisti | Research Fellows, Assegnisti | Postdoctoral researcher, Dottorandi | PhD students, Studenti | Students

SEMINARIO IN LINGUA: English
